

200mm Power-V Racing Clutches

PTT 's 200mm Power-V clutch is a well balanced blend of low MOI coupled with higher mass. This clutch has more mass than any other multi-disc racing clutch we make. The extra mass results in more heat resistance than PTT's smaller clutches. The larger diameter clutch discs deliver awesome torque capacity. Let there be no doubt about it, while this clutch has more heat resistance, AND higher torque capacity, it still has the class leading low moment of inertia all PTT clutches are renowned for. The performance and reliability are engineered by design.

Standard features built into every 200mm clutch include: Low profile clutch cover; Power-V drive system; micro finished, proprietary friction materials; Open design, runs cooler & cleaner; & CNC manufacturing to ensure legendary PTT quality & reliability.

Optional accessories for this clutch include: sprung hub clutch discs; light weight aluminum pressure plate, lightweight chrome-moly floater plates, and different friction materials designed for various racing needs.
